

# How to measure for an enclosure

## Checklist:

When ordering or requesting a quote, please use the appropriate Order / Quote Form on pages 99-101 and provide the following detailed information:

- 1. Model number
- 2. Finish color
- 3. Glass type
- 4. Finished Opening Size (F.O.S.) measurements  
**MEASURE TWICE, ORDER ONCE**
- 5. Hinge or pivot location
- 6. Shower head location
- 7. CENTER LINE or OUTSIDE LINE measurements if unit has return panels
- 8. KD unit, specify glass thickness you will be using
- 9. Drawing of enclosure
- 10. Uniform Plumbing Code Waiver to be signed and faxed back if...
  - A.** Bi-Pass unit is less than 51" wide
  - B.** Model 5100 or 6100 unit is less than 26 1/8" wide
  - C.** Model 5000, 5400H, 6000 or 7000H door size is less than 24" wide
  - D.** Model 8000 or 9000 door size is less than 24" wide

Enclosures without return panel(s) are measured **Width x Height** and for enclosures with return panel(s) measure **Width x Return Depth(s) x Height**. Enclosures with return panel(s) may be measured in one of two ways: **CENTER LINE** or **OUTSIDE LINE**. When ordering an enclosure we need to know which method was used in order to manufacture your enclosure to the correct size. For steam units, be sure to measure from the bottom where the curb will be, to the ceiling in at least 3 locations to check for out-of-level conditions. Also, check all walls for out-of-square conditions. (See **Figure 1**).

Opening conditions

Figure 1

### CENTER LINE (Typically used for first-time installations):

When an enclosure is installed using a **CENTER LINE** measurement, the curb is centered on the measurement line. (See **Figure 2**).

### OUTSIDE LINE (Typically used when replacing an existing enclosure):

When an enclosure is installed using an **OUTSIDE LINE** measurement, the curb is installed with the front edge aligned with the measurement line. (See **Figure 3**).

Cw<sup>®</sup> requires a drawing in every instance where an enclosure includes multiple panels, i.e., in-line, buttress and return panels. It is necessary to provide a detailed illustration with accurate measurements indicating whether the measurements are **CENTER LINE** or **OUTSIDE LINE**. In addition, you will also need to provide other information. Please refer to the Tub and Shower Enclosure Checklist at left.
